Justification:

This change was proposed in 2011 and been in practice via undergraduate advising since without the catalog being updated; it was updated in the Transfer Selection Criteria of this major but the Core requirements section was missed.

The secondary change to remove Math 008B was approved by the department faculty and Executive Committee in July 2016 and is now being added to this request. It was originally not included as it was past the submission deadline and was to be requested for the F17 catalog, but is now being incorporated into the 2011 change request for CEP approval.

Original justification:

- The catalog descriptions indicate that PHYS 002, “General Physics,” is for biological sciences students and PHYS 040, also “General Physics,” is designed for engineering and physical sciences students. The geology major includes geophysical and geobiological options. Our core physics requirements should match that range.
- The two courses have comparable rigor. Credit is awarded for only one of PHYS 002 and PHYS 040. With grades of B in either series, students meet prerequisites for courses in the PHYS 041 course, intended for physics majors. The calculus prerequisites do differ. The calculus prerequisites to complete the PHYS 020 A-C series are MATH 009A and B; to complete PHYS 040A-C series MATH 009A, B and C are required. Geology majors will all complete three quarters of first-year.
- Geology majors will all complete three quarters of first-year calculus, regardless of their physics series.
- The geology major recruits students from several sources, including the biological sciences and engineering. Our core physics requirements should accommodate transfer from these majors. We must already accept PHYS 002 for students who change major after completing a life sciences core curriculum. The same option should be available to all geology majors. Current practice causes needless tensions.
- We seek greater scheduling flexibility. The current physics component of our core curriculum has caused severe scheduling difficulties when the Physics and Astronomy department cancels a section of PHYS 040 in which our students have registered. By accepting PHYS 002 or PHYS 040, we open more scheduling options to our students without placing additional stress on the ability of the Department of Physics and Astronomy to deliver its part of the CNAS curriculum. PHYS 002 brings two other scheduling advantages: the separable lab course and the possibility of completing MATH 009C and PHYS 002C concurrently.
- Most geology majors complete the General Geology track, even though their goals may favor geobiology or geophysics. We must also reckon with geology majors who change tracks before graduation. For these reasons we propose to accept PHYS 002 or PHYS 040 in the core curriculum of all options in the geology major, rather than differentiate the physics requirement by option.
