Sample Program

Student programs are planned on an individual basis with their advisors, and there is considerable flexibility in the sequence in which courses required for the major are taken. For example, PHYS 040A, PHYS 040B, PHYS 040C can be started equally well during either the freshman or sophomore year. The sample program is typical for a well-prepared entering freshman who seeks the B.S. degree.
### Justification:

**Change of Major criteria:**
Math Dept. has removed MATH 008B from their curriculum.

Organic Chemistry LEC and LAB have been separated into two courses per Undergraduate Studies Committee recommendation. Key benefits include: Department resources will not have to be used to instruct students who have previously performed adequately in the lab component of the course. For the students who fail the lab and pass the lecture, there is no pedagogical change from the earlier practice of de facto separation of labs and lectures. The new structure could potentially improve the effectiveness of the labs. This new structure would allow for a separate faculty instructor to be assigned to the course who can devote more time to incorporating new activities and/or overseeing safety aspects of the lab.

Renumbering of organic chemistry was to comply with UCR course policy of having a zero in front of the number in order for BANNER to recognize the course as a lower division course.

BIOL 020 (2 Units) was added per Biology Dept. request to the Environmental Chemistry Option. It matches the curriculum of BIOL 05LA. Units range has been updated to include BIOL 020.
